

Barudan (Japan)

Barudan was the Founder of the first embroidery machine in Japan. The Multihead machines can embroider at a speed of 1000 rpm on apparel as well as home textiles. The machine come in a range of single head to twenty heads along with automending and auto trimming facility. Barudan has the latest machines having LAN Connection and Networking makes production control easier.

Barudan is the worlds first embroidery machine with a colour CRT along with spectacle tubular framing. Barudan is also the worlds first machine to have the largest embroidery area and the first to introduce Chenille Embroidery as well as cording.

The new SEQUIN DEVICE is available as a factory option on all new Barudan Machines particularly the BEDSH Series because of high speed operation and unmatched productivity on all type of threads and designs on Textiles and long width fabrics.
